

Web font sizing CSS units

Absolute e.g `px(pixel)`

Relative e.g `em,rem,vw,%`

`px` is used less these days

Web font sizing units

Web font sizing CSS units

`em` , `%` are both relative
to Parent (div)

Will explain it with Code

Web font sizing CSS units

`vw` is relative to the viewport
width (browser window width)

Web font sizing units

Web font sizing CSS units

`rem` is relative to the base body
font size (`body {font-size:18px}`)

`1rem = 18px` in this example
